Foundations of Physics, Vol. 8, Nos. 11/12, 1978

Subject Index to Volume 8

BCS model, superconducting representation of, 653
Bell's theorem, generalization of, 313
Brain functions, relationship with foundations of physics, science, and technology, 423

Causality for tachyons in special relativity theory, 329
Collision theory, some fundamental difficulties with quantum mechanical, 677
Conventionalism and general relativity theory, 229
Coordinate transformations and theory of measurement, 69

Dirac equation, quaternion formulation of, 439
Dirac's equation for the hydrogen atom, hypercomplex number treatment of, 123
Doppler effect, absolute spacetime treatment of, 637
Duality, 271

Einstein locality, consequences of, 103
Electron
  radiationless acceleration of, 879
  stochastic treatment of, 31
  velocity and momentum density of, 177
Electromagnetic
  field, a spinor equation of the, 745
  theory, clarification of an apparent asymmetry in, 921
Elemental constituents of physical reality, 759
Everett interpretation of quantum mechanics, 709

Field theories, general-relativistic and gauge, 695

Gauge field theories, 695
Gauss–Hertz principle, extension of, 359
Gaussian random fields, 295
General-relativistic field theories, 695
General relativity, conventionalism and, 229
Gravitation, Rastall's modification of Einstein's theory of, 59
Gravitational
  bending of light, 927
  theories, parametrized post-Newtonian approximation of, 59

Hidden variables, algebraic constraints on, 629
Hilbert space, nonlinear transformations in, 547
Hypercomplex numbers, 303

Information theory and quantum measurement, 805
Interaction types, stratification in five-dimensional manifold, 93
Irreversible conservative motion, 239

Lie groups, 303
Light, gravitational bending of, 927

0015-9018/78/1200-0961$05.00/0 © 1978 Plenum Publishing Corporation

Light speed, constancy of, 603, 609
Lorentz transformations, general form of, 787

Mach's principle, 399
Maximum entropy principle, analysis of, 493
Multilocal fields, 255

Neumann's principle, 277
Noncausal systems, logical discussion of, 463

Opaqueness for pp collisions, energy dependence of, 319

Parametrized post-Newtonian approximation of gravitational theories, 59
Phase factors, observation of, 667
Physical reality, elemental constituents of, 759
Position operator and position probability in relativistic quantum theory, 1

Quantum electrodynamics, within framework of new four-dimensional symmetry, 371
Quantum measurement
  and information theory, 805
  as a communication with nature, 805
  coordinate transformations and, 69
  statistical inference and, 117
Quantum mechanics
  a classical realization of, 481
  derivation from stochastic electrodynamics, 191
  Everett interpretation of, 709
  generalized two-level, 45
  of relativistic spinless particles, 851
  of space and time, 573
  stochastic interpretations of, treatment of electron in, 31
  tunnel effect in, 119
Quantum state, non-Hamiltonian evolution of, 45

Quarks
  interpretation of empirical parameters of, 417
  unobservability of, 793

Rastall's modification of Einstein's theory of gravitation, 59
Relativistic
  mechanics, generalized, 399
  quantum theory, position operator in, 1
  velocity addition theorem, derivation from double ratio, 131
Rotating disk experiments, 137
Retroactive influence, proof of, 615

Self-turbulence in the motion of a free particle, 735
Scientific discovery, rules of, 905
Spacetime
  absolute, theory of, 797, 801
  code, 211
  elementary foundations of, 507
  quantization, 399
  quantum mechanics of, 573
  syntopic measurements in, 393
Special relativity, causality for tachyons in, 329
Spinor Lie derivative, geometric significance of, 445, 593
Statistical inference and quantum measurement, 117
Steady state universe, in light of stochastic electrodynamics, 341
Stochastic electrodynamics
  steady state universe in light of, 341
  derivation of quantum mechanics from, 191
Stochastic interpretations of quantum mechanics, treatment of electron in, 31
Superconductivity, new theory of, 951
  microscopic mechanism for macroscopic asymmetry, 893
Superfluid vacuum state, 823
Symmetry
  four-dimensional, 833
  improper, 277

magnetic, 277
of electric and magnetic charges, 667

Tachyons, causality in special relativity for, 329
Tunnel effect in quantum mechanics, 119

Uncertainty relations, gamma ray microscope and, 845

Wave packets in quantum mechanics, nonspreading, 157, 565

Printed in Belgium

CONTENTS

Vol. 8, Nos. 1/2 **February 1978**

The Role of Position in Quantum Theory 1
Hans Laue

Short-Time Stochastic Electron 31
Paul D. Raskin

Generalized Two-Level Quantum Dynamics. II. Non-Hamiltonian State Evolution 45
William Band and James L. Park

Parametrized Post-Newtonian Approximation and Rastall's Gravitational Field Equations 59
Larry L. Smalley

Coordinate Transformations and the Theory of Measurement 69
Martin S. Altschul.

Remarks on Stratifying Interactions in Five Dimensions 93
Frank T. Vertosick, Jr.

On the Consequences of Einstein Locality 103
F. Selleri

Addemdum to Statistical Inference and Quantum Mechanical Measurement 117
Rodney W. Benoist, Jean-Paul Marchand, and Wolfgang Yourgrau

Wave Mechanics and the Tunnel Effect 119
L. Jánossy

An Elegant but "Simple" Form for the Dirac Hydrogen Atom 123
James D. Edmonds, Jr.

Derivation of Einstein's Velocity Addition Theorem Through Use of the Invariant Double Ratio 131
Dierck-Ekkehard Liebscher

Rotating Disk Experiments 137
Stefan Marinov

Vol. 8, Nos. 3/4 **April 1978**

A Nondispersive de Broglie Wave Packet 157
L. Mackinnon

Electron Velocity and Momentum Density 177
Granville A. Perkins

Quantum Mechanics Derived from Stochastic Electrodynamics 191
L. de la Peña-Auerbach and A. M. Cetto

Spacetime Code: Preliminaries and Motivations 211
Gin McCollum

Conventionalism and General Relativity 229
I. W. Roxburgh and R. K. Tavakol

Generalized Two-Level Quantum Dynamics. III. Irreversible Conservative Motion 239
James L. Park and William Band

Multilocal Fields—Some Examples 255
A. Z. Capri

Duality 271
Walter Wyss

Magnetic Symmetry, Improper Symmetry, and Neumann's Principle 277
E. J. Post

Gaussian Random Fields 295
S. P. Gudder

Nine-Vectors, Complex Octonion/Quaternion Hypercomplex Numbers, Lie Groups, and the 'Real' World 303
James D. Edmonds, Jr.

Generalization of Bell's Theorem 313
Nick Herbert and Jack Karush

Vol. 8, Nos. 5/6 **June 1978**

Energy Dependence of Opaqueness for pp Collisions at High Energies 319
T. T. Chou

How to Recover Causality in Special Relativity for Tachyons 329
Erasmo Recami

The Steady State Universe Revisited, with Stochastic Electrodynamics As a Guide 341
M. Surdin

Further Extension of the Gauss–Gertz Principle 359
Richard L. Moore

Quantum Electrodynamics Within the Framework of a New Four-Dimensional Symmetry 371
J. P. Hsu

Syntopic Measurements: A New Classification of Spacetime Measurement 393
Ronald G. Newburgh

Spacetime Quantization, Generalized Relativistic Mechanics, and Mach's Principle 399
A. Meessen

An Electrostatic Interpretation of Some Empirical Parameters of Light Quarks 417
D. M. Eagles

On the Relationship Between Human Brain Functions and the Foundations of Physics, Science, and Technology 423
Juan G. Roederer

Yet Another Formulation of the Dirac Equation 439
James D. Edmonds, Jr.

Geometric Significance of the Spinor Lie Derivative. I 445
V. Jhangiani

Can an Effect Precede Its Cause? A Model of a Noncausal World 463
Helmut Schmidt

A Classical Realization of Quantum Mechanics 481
Mark Davidson

Analysis of the Maximum Entropy Principle "Debate" 493
John F. Cyranski

Vol. 8, Nos. 7/8 **August 1978**

The Elementary Foundations of Spacetime 507
James Ax

Nonlinear Transformations in Hilbert Space 547
Peter R. Phillips

Nonspreading Wave Packets in Quantum Mechanics 565
V. K. Ignatovich

Quantum Mechanics of Space and Time 573
H. S. Green

Geometric Significance of the Spinor Lie Derivative. II 593
V. Jhangiani

On the Constancy of the Velocity of Light 603
T. M. Kalotas and A. R. Lee

Critical Comments on "On the Constancy of the Velocity of Light" 609
J. P. Hsu and T. N. Sherry

Proof of a Retroactive Influence 615
C. W. Rietdijk

Algebraic Constraints on Hidden Variables 629
Arthur Fine and Paul Teller

The Light Doppler Effect Treated by Absolute Spacetime Theory 637
Stefan Marinov

Vol. 8, Nos. 9/10 **October 1978**

Self-Consistent Selection of a Superconducting Representation for the BCS Model 653
Alvin K. Benson

Observable Phase Factors and Symmetry of Electric and Magnetic Charges 667
J. P. Hsu

Some Fundamental Difficulties with Quantum Mechanical Collision Theory 677
William Band and James L. Park

On General-Relativistic and Gauge Field Theories 695
Hans-Jürgen Treder and Wolfgang Yourgrau

A Note on the Everett Interpretation of Quantum Mechanics 709
Paul Benioff

A Probabilistic Analysis of the Difficulties of Unifying Quantum Mechanics with the Theory of Relativity 721
Manfred Neumann

Self-Turbulence in the Motion of a Free Particle 735
G. Sivashinsky

A Spinor Equation of the Pure Electromagnetic Field 745
Granville A. Perkins

Toward an Elemental Grounding of Microphysics 759
Joseph H. Spigelman

On the General Form of Lorentz Transformations 787
T. M. Kalotas and A. R. Lee

Parton Confinement: A Different Perspective 793
James D. Edmonds, Jr.

A Criticism of the "Absolute Space-Time Theory" 797
Zoran Vrcelj

Comments on: "A Criticism of the 'Absolute Space–Time Theory' " 801
S. Marinov

Vol. 8, Nos. 11/12 **December 1978**

Quantum Measurement as a Communication with Nature 805
John F. Cyranski

The Superfluid as a Source of All Interactions 823
K. P. Sinha and E. C. G. Sudarshan

General Flat Four-Dimensional World Pictures and Clock Systems 833
J. P. Hsu and J. A. Underwood

Heisenberg's Microscope—A Misleading Illustration 845
Chandrasekhar Roychoudhuri

Quantum Mechanics of Relativistic Spinless Particles 851
John R. Fanchi and R. Eugene Collins

When Can a Classical Electron Accelerate Without Radiating? 879
Philip Pearle

Microscopic Mechanism for the Macroscopic Asymmetry of Superconductivity 893
Alvin K. Benson

The Rules of Scientific Discovery Demonstrated from Examples of the Physics of Elementary Particles 905
Herbert Pietschmann

Clarification of an Apparent Asymmetry in Electromagnetic Theory 921
L. M. Stephenson

Johann Georg von Soldner and the Gravitational Bending of Light, with an English Translation of His Essay on It Published in 1801 927
Stanley L. Jaki

New Theory of Superconductivity 951
A. B. Bell and D. M. Bell

Author Index to Volume 8 959

Subject Index to Volume 8 961
